

You have many options for installation

1. Self install. **Do it yourself (yes you can!).** Skill level needed is akin to a normal carpet installation. Pickup direct at our Mississauga warehouse (near airport), or we can deliver.
2. Select from many hundreds of good local **landscaping contractors.** Perhaps your current familiar service trades will embrace all the work? (BEST WAY: they can prep the gravel foundation, and we will do the finesse grass work). Just tell them to contact us and we'll work closely with them. NOTE: Intense or major earth shaping and prep should always involve these professional talents, their tools, and specialized equipment.
3. **Our own grass installation crews** are always available. They can bid on just grass, or stone/prep/and grass. You decide your comfort. We do bring experience to your jobsite. Every site has different complexities. We can help you decide how to proceed.

OUR PLEASURE TO WORK WITH YOU

We invite you to visit and explore our website for additional information and photos:

[www.versatilegrass.com](http://www.versatilegrass.com)

Phone, fax, or email into our Toronto offices. Invite us to visit your jobsite (no risk, no pressure, and it's FREE) to draw, measure, and show the current lineup of many Versatile Grass styles, qualities, and prices that best fit your needs and expectations. Always thorough advance project paperwork for your peace of mind.

*"for everywhere you can imagine!"*

"How does Versatile Grass work?"

Start with a minimum of a couple or few inches of chip stone and screening to enhance drainage and levelness. Compacting is astute. Good prep is never a mistake! Preparation effort is very much a function of your investment and expectations.

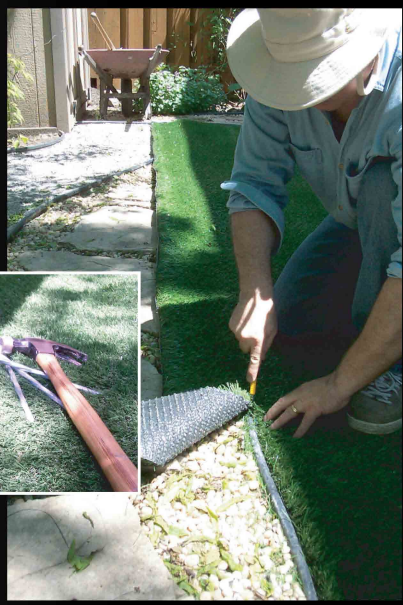

Now the 15 foot wide Versatile Grass sheet turf is unrolled into 'pre-planned' proper positioning...

If seaming is required ...

Clean edges are mated and then set into a specialty wide nylon fabric seam tape liberally pasted with all-weather adhesive

Trim with razor to contour fit. Anchor edges with oversized galvanized landscaping spikes

Now our own Versatile fine grind crumb rubber is brushed into the grass structure to both support the blades and to impart realistic cushioning. An amazing transformation.

The makeover is complete.

"May we order some Versatile Grass for you?"

"a brilliant new landscaping and outdoor finishing material ..."

no mowing no weeding no watering  
no pesticides no herbicides
